

Invisalign:

Invisalign treats the vast majority of common problems for adults and teens:

Whether your smile needs minor improvements or something more extreme, Invisalign can help. Invisalign is successful at treating crowding or excess spacing of teeth. It can also be used to treat more complex cases such as overbites, underbites, and even crossbites. In fact, an experienced Invisalign-certified doctor can use Invisalign for all or part of almost any treatment plan. Made to fit your lifestyle, not change it. Because Invisalign uses comfortable plastic aligners to move teeth, you can continue enjoying your active lifestyle even during treatment. There is no metal or wires to irritate your lips or cheeks. You can still play sports or just enjoy a game of catch in the backyard without worrying about injuring your mouth. And since Invisalign is removable, you can always take it out for that special event or when you get that midnight caramel apple craving.

Look your best during and after treatment:

Is maintaining your professional appearance important to you? Are you ever asked to speak during a meeting in the public? Because Invisalign is nearly invisible, most people won't know you are straightening your teeth unless you tell them. After completing your treatment you'll also enjoy the added assurance of being able to express yourself with confidence; without being embarrassed or insecure about your teeth.

Our Experienced Invisalign Doctor can help:

The best way to find out how Invisalign can work for you is to let our certified Invisalign Doctor examine you. She can evaluate your specific needs and help determine the best treatment plan. This is a free consultation. So make an appointment to get the amazing smile you've always wanted.
